

# Hully Access video tips

**Make sure the video is clear and not blurry.**

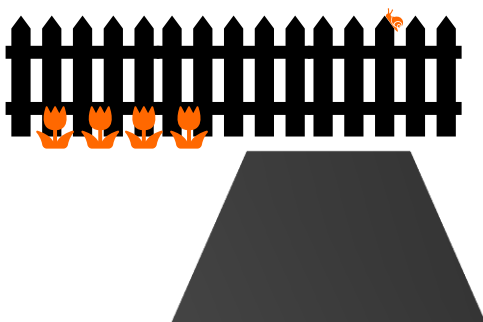

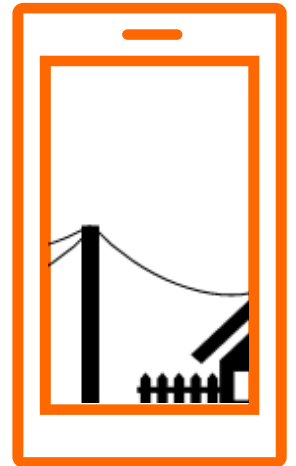

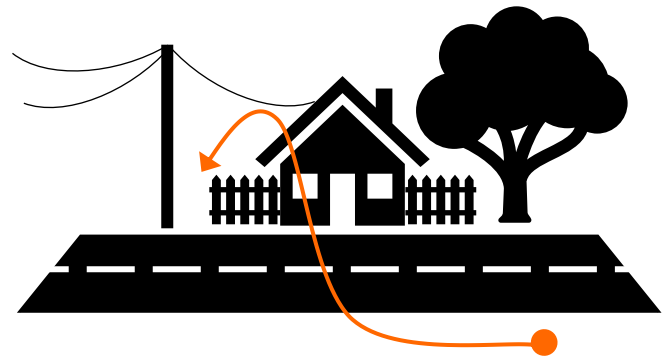

**Avoid being too close.**

**Showing the whole picture helps us to understand the obstacles we may face with delivery.**

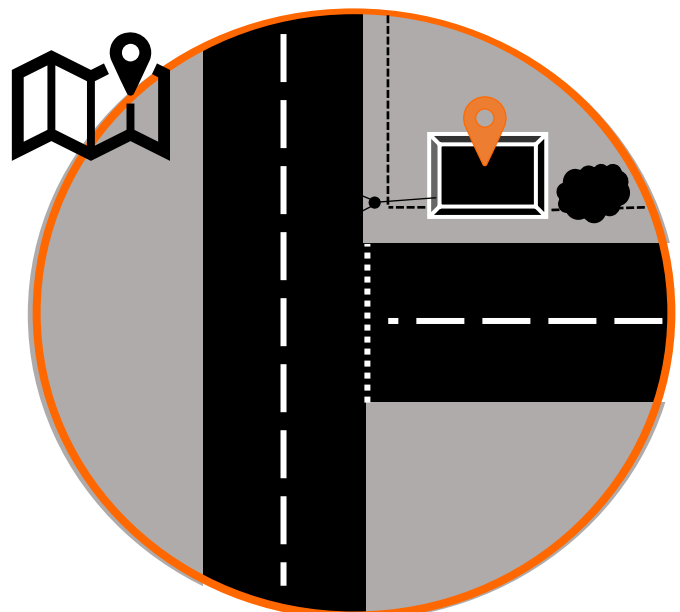

**Starting from the street follow through to where the pod needs to be delivered. Please ensure you are showcasing any fences, walls, powerlines etc that it may need to pass or go above/below.**

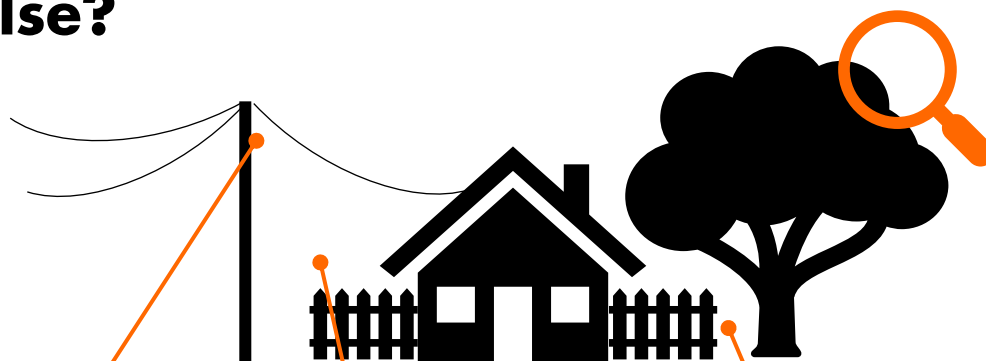

**When in the garden please showcase the other side of any fences/hedges/walls and the base where the pod will be going.**

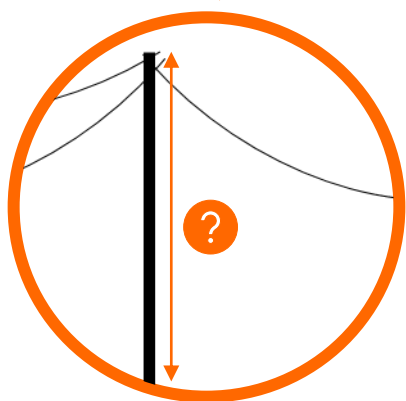

**If you can, a google maps ariel view will help us again to see the bigger picture.**

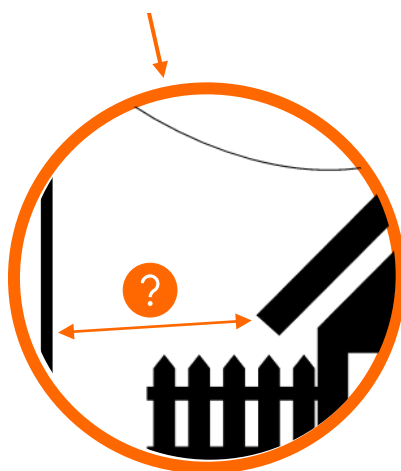

# What else?

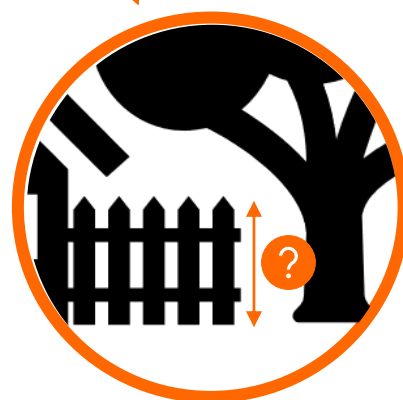

Please provide key measurements such as...

**Cable/branch heights**

**Widths the pod may need to go through**

**Fence/wall heights**

When considering where we will park to deliver remember we need **at least 3m width** to be able to place down our outriggers safely.
